

PULL-UP BANNER CARE INSTRUCTIONS

Pull-up banners are designed for indoor use. They do not stay up well in even a gentle breeze, and are not UV or water proof. If you need an outdoor solution - we can help with that too!

1

Protect the Surface

Pull-up banners are made of high quality synthetic stock. Do not attach anything to them that may damage the surface, e.g. Blu Tack, velcro dots, glue and other adhesives. Do not use any cleaning products, a damp cloth should be all you need.

2

Protect the Mechanism

Even the best quality mechanisms can be damaged when not treated with care. Always raise and retract the banner slowly and evenly, to protect your banner.

3

MOST IMPORTANTLY

DO NOT SUDDENLY DROP THE BANNER WHEN RETRACTING. THIS WILL ALMOST CERTAINLY DAMAGE THE MECHANISM AND MAKE THE BANNER UNUSABLE. THIS IS THE MAIN CAUSE OF BANNER FAILURE, AND IS NOT A MANUFACTURING FAULT.

NOTE: Dropped banners are easily recognisable and Imagesource does not take responsibility for replacement of the graphic or unit should mishandling occur.

IMAGESOURCE

From little things, big images grow.
